

**Learn all about bees  
with this FREE**

## **Bee Roadzz Activity booklet .....**

**Colour in Bertie the Bee and the flowers**

**Do you know how bees make honey?**

DID YOU KNOW?

Bees drink nectar from flowers and take it back to their hive to make honey

DID YOU KNOW?

Bees must collect nectar from about two million flowers to make just one jar of honey!

DID YOU KNOW?

Bees are the only insect in the world that make food for humans

**Open up for more activities and to find out why bees need our help.....**

# Why do bees need our help?

There are fewer and fewer bees due to disease, pesticides and the disappearance of wild flower meadows and places for bees to nest, so it is really important that we look after our wild bee populations.

The good news is that we can all play a part in helping to conserve bees, starting with our own gardens.....

Make your garden bee friendly!

- \* Plant flowers that bees love (see below)
- \* Don't use bug sprays
- \* Let wild flowers grow

## Bee friendly flowers.....

Lavender

Bluebells

Hawthorn

Viper's Bugloss

Crocuses

Borage (Starflower)

Mahonia

Rosemary

Ox-eye Daisy

Verbena

Crab Apple Tree

Sedum

## BUZZWORDS

How many of these 'bee' words can you find in the wordsearch?

## JOIN THE DOTS TO FIND THE BEE!

"I love flowers, and I'm yellow and black. Buzz buzz, I'm a \_\_\_\_\_"

## MAKE A BEE DRINKING BATH!

Bees and other flying insects need access to fresh water that they can't fall into and drown. Fill a shallow dish with some pebbles and/or shells and some water, making sure that it's not too deep. Then look out for bees enjoying a drink.

## What is a pollinator?

Pollinators drink nectar from flowers and feed off pollen. Then they transport the pollen grains as they travel from place to place. Lots of insects and small animals pollinate many crops that we eat, such as tomatoes, peas and apples, they also help our wild plants throughout the countryside.

## Do you know which pollinator is which?

MOTH

FLY

BIRD

BAT

WASP

BEE

BEETLE

BUTTERFLY

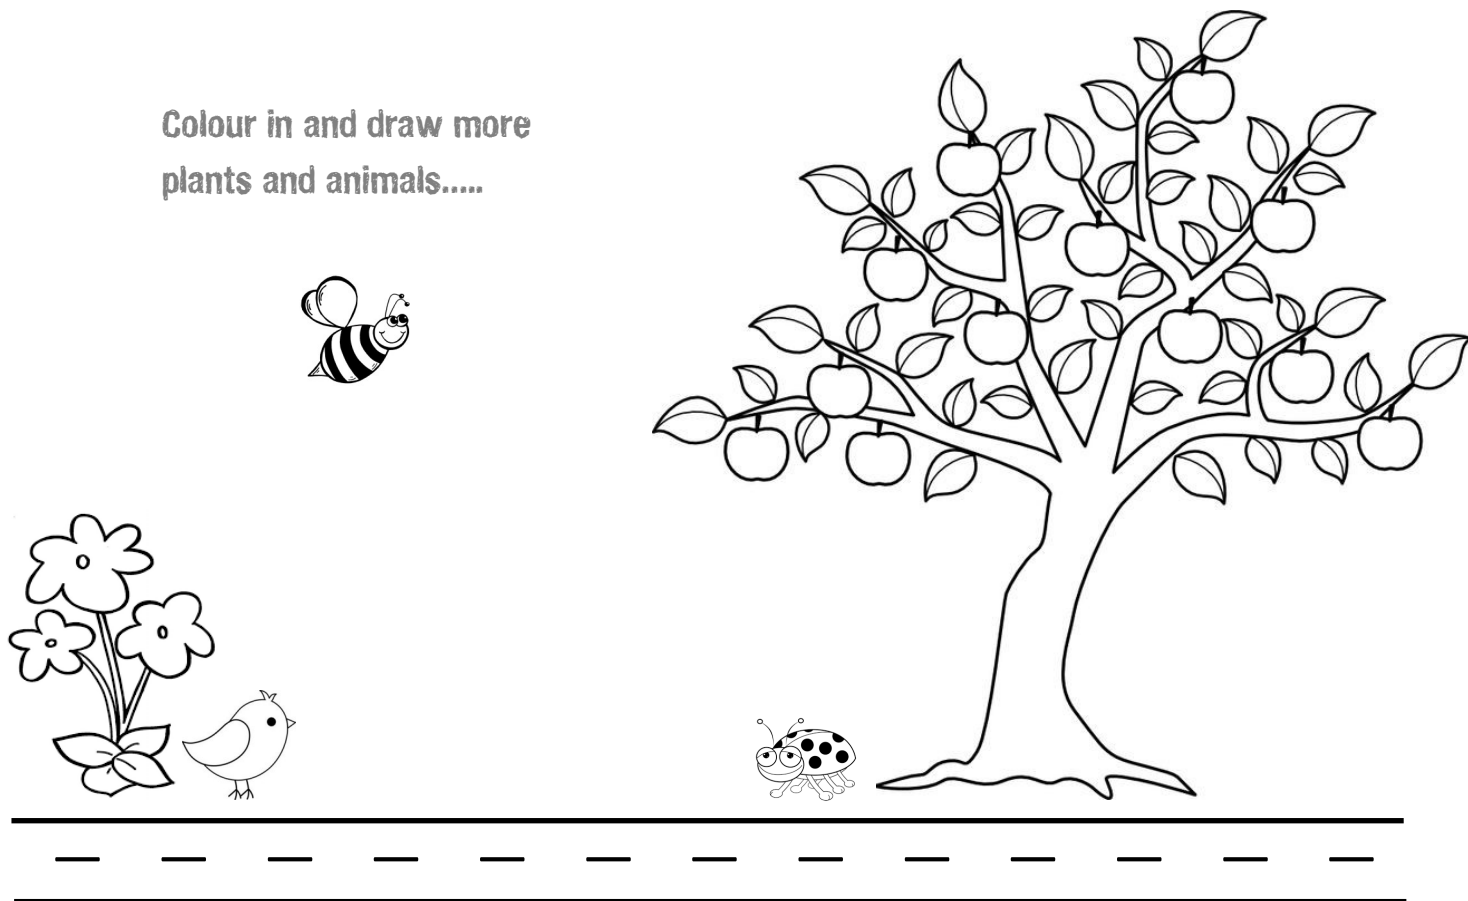

# What is a Bee Road?

Bees and other pollinators need lots of places to find their food so they don't have to travel long and tiring distance between small areas of the flowers they like. Honeybees will fly up to five miles if they have to – what a long way for a tiny bee! We can make it easier for them by planting more suitable flowers in connecting areas along The Bee Roadzz.....

Colour in and draw more plants and animals.....

## Get involved...

Find out more by following the Bee Roadzz partners and look out for upcoming events in the local area.
